What Are SVT TLEs? An Introduction

Understanding the Basics of TLEs

TLE stands for Two-Line Element. It is a data format encoding a list of orbital elements that describe the position and velocity of a satellite at a specific time. TLEs are essential for tracking satellite orbits and predicting their future positions in space.

The typical TLE consists of two lines of data, each with specific parameters:

- Line 1: Contains satellite catalog number, classification, launch details, epoch date, and more.
- Line 2: Includes orbital parameters such as inclination, right ascension of ascending node, eccentricity, argument of perigee, mean anomaly, and mean motion.

SVT TLEs refer to a specialized or context-specific subset of TLE data used in particular applications, such as satellite tracking software, space situational awareness, or specific satellite operations.

What Does "SVT" Stand For?

While "SVT" can have various meanings depending on the context, in the realm of satellite tracking and TLEs, it often refers to:
