Sample Seed Technology MCQs with Explanations

Let's review some illustrative MCQs that showcase typical questions and their detailed explanations:

Q1: Which of the following seed types is characterized by its ability to tolerate desiccation and can be stored at low temperatures for long periods?

- a) Recalcitrant seeds
- b) Orthodox seeds
- c) Intermediate seeds
- d) Viviparous seeds

Answer: b) Orthodox seeds

Explanation: Orthodox seeds are desiccation-tolerant and can be dried to low moisture contents, allowing long-term storage under low-temperature conditions. Recalcitrant seeds, on the other hand, are sensitive to drying and cannot be stored for extended periods without losing viability. Understanding seed types is fundamental in seed storage and conservation.

Q2: The primary purpose of seed certification is to ensure that:

- a) Seeds are free from pests and diseases
- b) Seeds meet quality standards and are true to type
- c) Seeds have high germination rates only

d) Seeds are genetically modified

Answer: b) Seeds meet quality standards and are true to type

Explanation: Seed certification verifies that seeds conform to specific standards for purity, viability, and genetic identity, ensuring farmers receive high-quality, true-to-type planting material. While pest and disease control are important, certification broadly encompasses quality assurance.

Q3: Which method is commonly used to determine seed moisture content?

a) Germination test

b) Oven drying method

c) X-ray analysis

d) TTC viability test

Answer: b) Oven drying method

Explanation: The oven drying method involves drying a seed sample at a specified temperature (usually 130°C) until a constant weight is achieved. The loss in weight corresponds to moisture content. Accurate moisture determination is essential for seed storage and longevity.

Q4: The process of treating seeds with fungicides or insecticides to prevent pest attacks is called:

a) Seed certification

b) Seed priming

c) Seed dressing or seed treatment

d) Seed coating

Answer: c) Seed dressing or seed treatment

Explanation: Seed treatment involves applying chemical or biological agents to seeds before planting to protect against pests and diseases, improving germination and vigor.

Q5: Which of the following is NOT a factor affecting seed longevity?

- a) Storage temperature
- b) Seed moisture content
- c) Light exposure during germination
- d) Seed maturity at harvest

Answer: c) Light exposure during germination

Explanation: While storage conditions (temperature, moisture, maturity) affect seed longevity, light exposure during germination is related to seedling development, not seed longevity during storage.
